

BLACK & WEATHERGRAIN® PANELS (CEDAR/COASTAL GRAY) — 8' WIDTH

- The top and bottom rails have aluminum stiffeners inside them.
- Use three metal inserts inside the tongue and groove pickets, 24" in from each post and one at the mid-span.
- It is also required to fix the u-channel to the fence post with the screws that are included. One screw about 1" from the top, one screw in the middle, and one screw about 1" from the bottom. This provides extra stability and support for the pickets.
